

Back-up and Recovery as a Service

Protect your Business and Data with Nouveau's Back-up and Recovery as a Service

Now more than ever organisations are turning to a back-up-as-a service in a move to shift from physical tape to an offsite digital back up service to meet the demands of rising data volumes and compliance regulations. Nouveau offers a range of onsite and offsite/hybrid cloud-based data protection solutions to ensure resilience across all data assets.

Cloud Back-up and Recovery

Our service supports business continuity strategies and enables recovery from unforeseen problems. We will help you to automate the entire back-up process, so you don't have to spend valuable time on manual back-ups. We will work with you to determine the right approach depending on how much data you need to store, how many virtual machines, and whether you need immediate access. This enables us to configure your data storage in the cloud and provide you with the most cost-effective, scalable, and long-term storage solution.

In addition, our cloud service facilitates instant recovery to existing on-premise servers. Taking a replica of your on-premise systems should the worst happen we can get you back up and running as quickly as possible.

Office 365 Back-up

There is a common misconception that Microsoft fully backs up Office365 mailboxes and files as part of the subscription, but this is not the case.

Microsoft do not provide native options to back up Office365 mailboxes and files – Microsoft is purely responsible for providing the necessary infrastructure and ensuring Office365 works, but it is the responsibility of the customer to secure and protect its Office 365 data.

Our Office365 Backup service enables you to back and restore all your mailboxes and files in One Drive and Sharepoint through a centralised multi-tenant online console, on a monthly subscription.

Alternatively, you can let us manage this process for you with our managed service.

Service Overview

During our introduction scoping call we will ask a number of questions to understand your requirements so we recommend the right solution for your business.
