

Forti Quickstart

Making your life easy
with pre-configuration
services

Pre-Configuration Service

As a Fortinet Platinum Partner, Nouveau Solutions' highly skilled engineers are able to provide the highest quality of support for your business. Nouveau's Forti-QuickStart service has been designed to provide customers with the option of receiving their Fortinet Products (up to and including the FG100 Range), pre-configured and ready to plug in and work.

Delivered ready to go

Pre-configuration steps include:

- Check the firewall's power on self-test functions correctly
- Upgrade the firewall firmware to the latest recommended version
- Configure the required IP addressing
- Configure the required routing (max 5 static routes)
- Configure the firewall ports
- Configure the required network objects and object groups for your network environment (max 5 objects)
- Configure the appropriate whitelist security policies to control inbound and outbound access (max 5 policies).
- Configure the appropriate blacklist security policies to control inbound and outbound access (max 5 policies).
- Deploy the latest security best practice configuration (security 'hardening')
- Knowledge Transfer and Handover
- Optional setup into FortiAssist, our Proactive Monitoring service

We will send out a questionnaire that allows us to gather the information we require for pre-configuration and then the unit is preconfigured and shipped to site. We will then contact the customer and carry out a handover.
